# What did you just say?

Quick recap of LiXuid session

# New 'XML Tool' Tasks to cover key processes

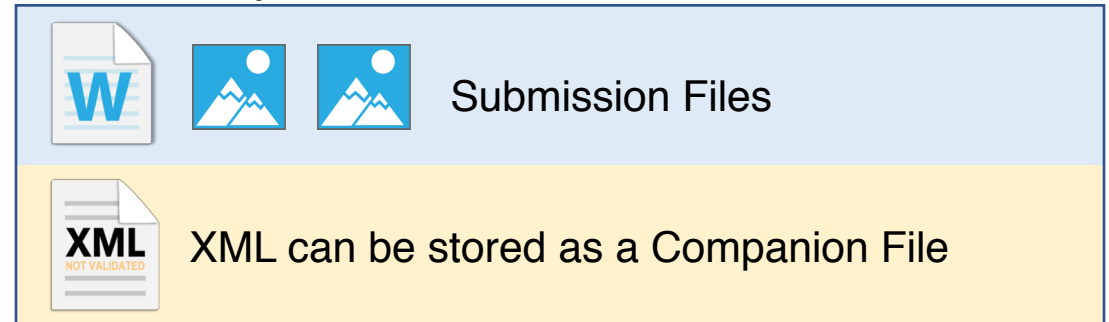

- Transforming, Validating and Importing XML ('Process' Task)
  - Custom transforms for converting XML (e.g. to/from Aries XML)
  - Validating to Aries or non-Aries XML DTDs (structure)
  - Applying Schematron Rules (structure and content)
- Sending XML to third parties (any Task)
  - Any Task can send out Companion File XML or Aries XML
- Online Editing of the full document text in EM ('XML Editing' Task)
  - By content experts; we hide the XML
  - **Requires Aries XML file**
- 'Full-Text Conversion' Task
- Page makeup/layout ('Autopagination')

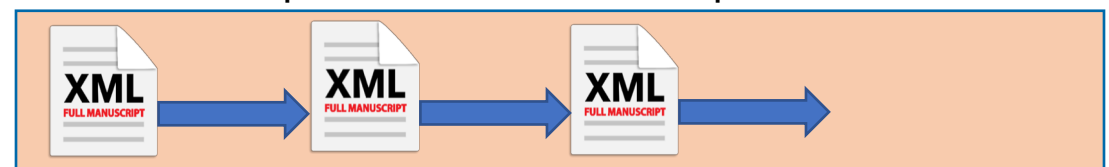

# Aries XML?

- XML Files can be handled as Companion Files
- But LiXuid MS adds new 'Aries XML' file stream
- Specific XML format
  - Subset of JATS
  - Allows us to develop internal tools that expect this format

## File Inventory

## Aries XML – special XML file stream per submission

# Aries XML?

- Subset of JATS 1.2 (Publishing)
  - 100% valid to JATS 1.2
  - JATS has 16 ways to link authors to affiliations; Aries XML has 1
  - This allows us to develop tools based on this narrower subset
- Aries Full-Text Tagging Guidelines
  - Not everything can be restricted by the DTD
  - E.g. “Empty” cross refs for numbered bibliographies allow automation
- Compliant with JATS4R
  - Optimized for re-use and machine readability

# **Additional PM/LiXuid- Related Features**

*New, general EM/PM features  
developed to support LiXuid*

# Image File Previews

- Will be standard in PM
- Created on uploading image files
  - On Preview attempt for legacy files in Figure family
- Used by XML Editor

**File Preview: skull.gif**

# File References

- Available to everyone in 16.1
- Can be used to link related files.
- Can be used to rename files, e.g. for Production
- For LiXuid, can be used to automatically identify the correct image files to use in the XML Editor
  - Assuming Aries XML format used in XML

# Item Type Configuration for Renaming

### Edit Submission Item Type

[Insert Special Character](#)

Item Type:   
*Maximum 256 characters*

---

Item Type Family:

'Auto' Suggest File Reference values

- Truncate Filenames (remove Format Extension and 'File Use Suffix')
- Suggest EM XML Format File References

**Source Identifier Content Label**      **'Number' Metadata Field**

seandev161\_[MS ID].           

**Example:**  
seandev161\_Seandev150-18-05-003.fig1

Some transmittal, export or download methods will automatically rename files using the File Reference as the basis of the new file name. If you use the same File Reference to identify multiple versions of the same document image, you should differentiate these in EM by applying different Item Types and define different suffix values here to be included in the new file name for each Item Type. This will also be used when truncating the Filename to generate a suggested File Reference, where applicable.

Apply 'File Use Suffix' when processing Filenames

Suffix:       Example: The suffix used when renaming files of this type

Auto suggestion?

# Automating File References

- If 'Auto' is enabled EM will suggest File Reference values
  - If it can, and there is no existing one
- Two options
  - Truncation – the opposite to renaming
  - Aries XML File Format, ready for LiXuid Autoconversion
- Aries format requires Item Type Metadata field
  - To collect a 'Number' value
- Item Type Metadata can now be used for Companion Files
  - Collected on submission and/or File Inventory

Suggest EM XML Format File References

**Source Identifier**

**Content Label**

**'Number' Metadata Field**

seandev161\_[MS ID].

# 'Use in XML'

- Specific to LiXuid and Aries XML
- 'Use in XML' filters out unrelated files in Automatic Assignment

If 'Automatically Select Files for Assignment' is enabled, files in the submission File Inventory that match the configured File Types will appear pre-selected for manual task assignment or will be automatically included when a task is assigned automatically.

- Automatically Select Files for Assignment
- Restrict selection to XML-Related files i

Configure the Item Types for automatic selection. You may select multiple Item Types or de-select an Item Type by clicking on an item while holding down the CTRL key (Windows) or Apple/Command key (Mac). Important Note: if the task is an FTP task requiring a File on assignment, and the Task is configured to be Assigned Automatically, you must select an item here for the task to ever be assigned.

# Why use File References?

*Identifying external files supplied  
by the Author*

# Aries Full-Text Conversion Task

- XML Tool Task, assigned like any other
- Takes a Word document as the Assignment File
- Triggers a new system process
- Automatically converts Word document to structured XML
  - No template needed
  - Heuristics to deconstruct files with a variety of structures

# Full-Text Conversion: Embedded Images

Word file contains embedded image

Conversion creates XML reference, extracts image, creates filename

Journal Code from EM

ID from EM Submission

```
<inline-graphic xlink:href="JXYZ_JXYZ-D-18-00017.fx1" />
```

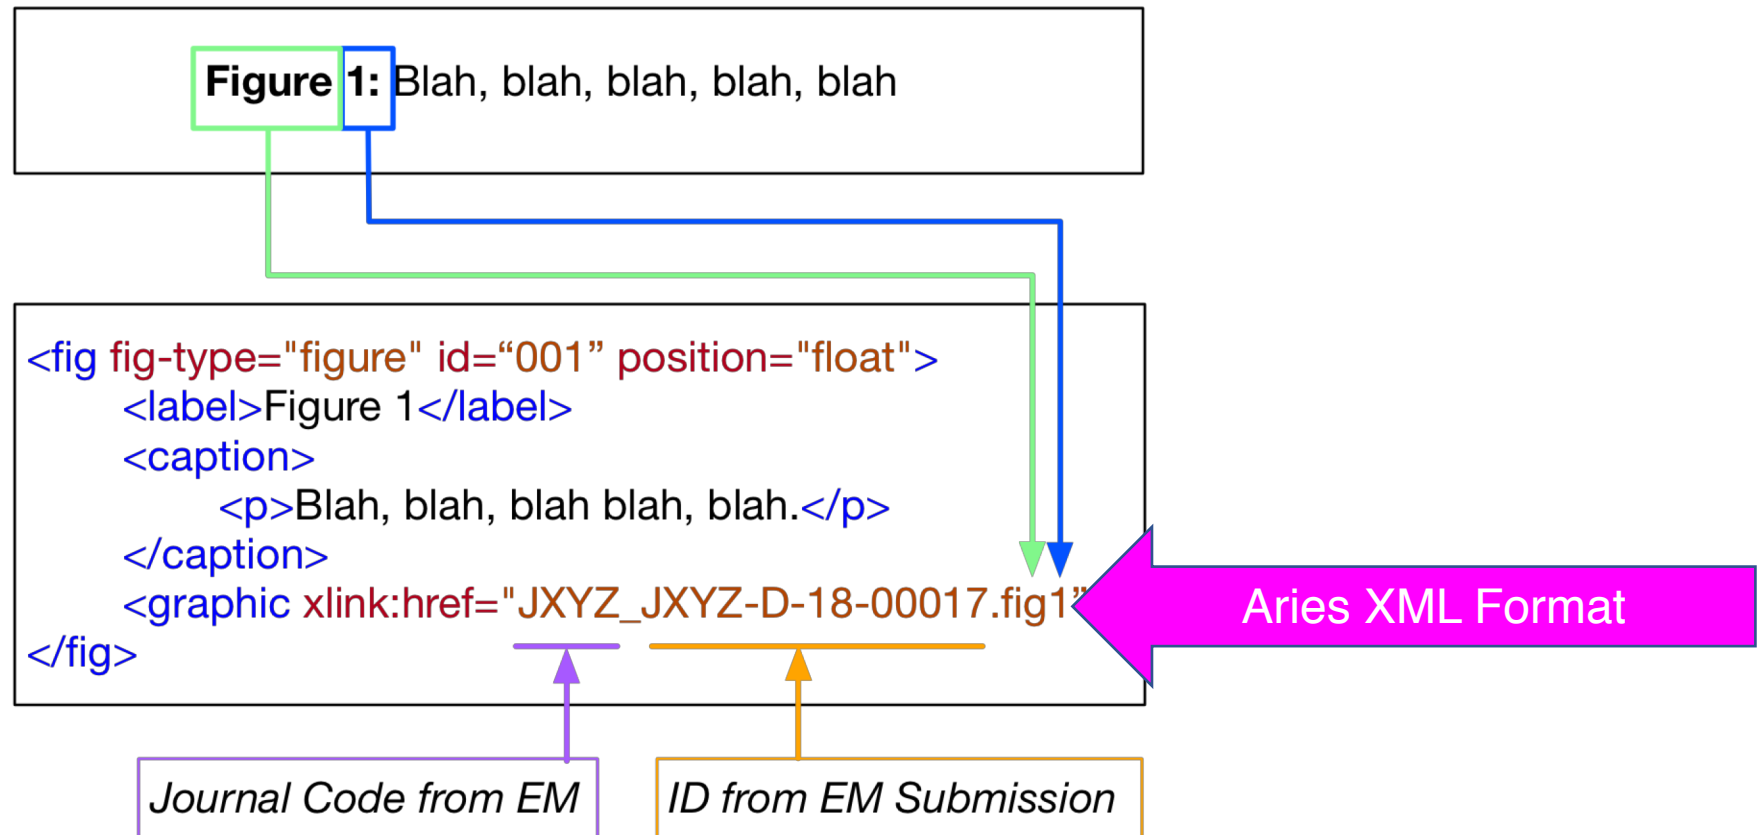

'fx' prefix + count

Matching filename created

JXYZ\_JXYZ-D-18-00017.fx1.jpeg

# Full-Text Conversion: External Images

Conversion identifies a caption; builds XML version with an *assumed* filename

# XML Editor Requests Image from EM

The screenshot shows an XML editor window with a manuscript page. The page contains a paragraph of text, a figure placeholder labeled 'FIG. 9', and another paragraph. A context menu is open over the figure placeholder, with the 'Add image...' option highlighted. The figure placeholder contains three scatter plots with regression lines. The first plot shows a positive correlation, the second shows a scatter of points with a horizontal line, and the third shows a negative correlation. The text above the figure reads: "Distribution of lead-lag correlation coefficients between composited EAP index and OLR (shaded). The negative (positive) number in the upper-left corner refers to the OLR leading (lagging) the SC EAP index dth day. The correlations significant at the level are shown as black lines." The text below the figure reads: "The ocean and atmosphere is coupled, and impact of SSTA on atmosphere is complex. In addition, it is related to time scales. For climate scale, it is possible that the ocean has a strong effect on EAP teleconnection (22; 23; 24). However, on synoptic scale, the SSTAs and the EAP pattern are likely to affect each other. 25 revealed that WPSH and the beneath SSTA

### Define File References for Manuscript Number Unassigned John MacJohn "Checking file reference behaviour"

References*

# Improved Item Type Mapping

- Task configuration to map file extensions to Item Types
- Applies to files returned on Task completion
- Enhances existing 'Limit upload' options for all types of Task (not just LiXuid)

## Companion File Options

- Show Warning if File not uploaded when Task is Submitted
- Allow assigned companion files to be replaced when submitting the task
- Limit the Submission Item Types that can be uploaded when Task is Submitted:

Use the table below to restrict the Item Types that can be uploaded when a task is submitted, based on file extensions that you enter (with or without periods), separated by spaces. If you except those with a special mapping defined. For Production Task Import Methods, XML Proces select a Default Item Type other than "None".

Allow Upload	Default	Item Type	Identifying File Extension
	<input type="radio"/>	none	
<input checked="" type="checkbox"/>	<input type="radio"/>	Online Figure	.jpg .jpeg .png
<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	Print Figure	.tiff .eps
<input type="checkbox"/>	<input type="radio"/>	Manuscript	
<input checked="" type="checkbox"/>	<input type="radio"/>	Author Proof	.pdf

## Scheduling and Due Date Options

- Show Task in Production Status Grid
- Include this task in 'At Risk' and 'Must Start By' date display

# Settings to prevent mis-assignment

- Prevent Task Assignment if there is no Aries XML
- ‘Lock’ the XML when assigning the task
  - When Aries XML is processed by a 3<sup>rd</sup> Party

End Production Automatically after this task is Completed

For tasks used in workflows that process XML, you can prevent the assignment of the task if the internal 'Full-Text XML' does not yet exist for the submission. This applies even if the task itself does not process this Full-Text XML file.

Task Assignment Requires the Presence of Full-Text XML

When assigning a task in a workflow that processes XML, you can 'Lock' the submission to prevent concurrent assignment of XML Tool Tasks and tasks configured to set this 'Lock', to prevent them modifying the Full-Text XML. A subsequent 'XML Process' task configured with 'Resulting File Replaces the Current Full-Text XML' will unlock the submission to allow the Full-Text XML file to be processed once more. 'XML Locks' can also be released manually from the File Inventory by a user with the 'Set/Release XML Lock' permission.

Lock Full-Text XML on Task Assignment

Batch Assignment can be triggered on either a set of submissions selected from the Search Submissions Results Production view, or all Submissions in a Schedule Group selected from the Manage Schedule Groups folder. Only tasks

# XML Locked

- Fail-safe setting to prevent XML Tool Task Assignment
- Replacing Aries XML 'Unlocks' the XML
- Or Unlock manually
