Another Peer Review System

Vision

- One stop shop for researchers
  - Submission
  - APC and page charges
  - Proofs
  - Reading
- Metadata extraction
  - Less manual form filling for authors
- ORCiD/Crossref/Ringgold integrations
  - Extraction of key information for authors from their ORCiD profile
  - Type ahead options for Funding and Institution details

Why?

- Control of the submission process on a large scale

- Smooth transitions for authors

- Branded experience

- Modern interface

- Control of data

- Faster development using Agile methodology

Submission Creation

Submit to

Imaging Science Journal   ▾

Instruction for authors

☐   I have read the author guidelines for this journal

Original material

☐   I have only submitted this article to this journal and it has not been published anywhere else

Article type

Select an article type   ▾

The type of articles accepted by this journal are listed in the dropdown

Start

1 Manuscript — **2** Subject — **3** Authors — 👁 Preview

Manuscript Details

Manuscript Title

You can enter characters not found on a standard keyboard

Abstract

This should be no more than 250 words long and can be enhanced with a video abstract   0 / 250 Words

Are you submitting your paper for a specific special issue? (This is typically in response to a Call For Papers, Editor request, or direct invitation)

◯ Yes   ◯ No

Freedom article publishing charge

This journal is open access, which means that anyone can access the articles published, anywhere in the world. Authors with funding, institutional support or from commercial organisations should select the recommended article publishing charge (APC) of 1350 USD (plus tax) to support sustainable open access publishing. Authors without direct funding should explore all options for funding the publication of their article.

Please confirm what contribution you can make if your article is accepted by our editors. The amount selected should include any discount that you're entitled to.

○ $1350 USD (Recommended)   ○ I need to pay a different amount

☐ I accept responsibility for payment of the APC I have selected above if my work is accepted for publication

How does it work?

INGEST

Once an author clicks submit all data is tagged using JATS XML and files are packaged up into Zip files which are sent to Aries' FTP server

Aries' Ingest service sweeps the server every minute to check for new packages.

Metadata and files are extracted and ingested into the relevant Editorial Manager site

Great! What are the limitations?

Current version of Ingest has some limitations (because it wasn't designed for this!)

- Custom questions data cannot be matched up so has to be ingested as an Additional Manuscript Detail field

- File designations cannot be ingested so these have to be assigned manually, a text list is ingested as an AMD for Admins to refer to if the designations are not obvious

- No automatic PDF build

- No API integration for status updates on papers

- Revisions not automatically recognised

Some Stats!

- Number of applications built = 7!

- Months in development = 3 months to MVP, 8 months to full release

- Number of journals using the submission portal = 60

- Number of Original Submissions = >3000

- Number of Revised Submissions = > 442
